Deutsche Telekom: making security easy indeed

- "Internet Protect Pro": complete, one-source protection against threats from cyberspace
- Suitable for both large corporations and SMEs
- Cloud-based cyber security

_____

SMEs can now afford the sort of protection against cyber attacks that previously only large companies and company groups could pay for. This is because Deutsche Telekom will soon be offering "Internet Protect Pro," a new solution, from its Magenta Security Portfolio, that meets the very highest security standards – and is reasonably priced to boot. At CeBIT in Hanover today, it presented Internet Protect Pro, which it is offering, in cooperation with the U.S. manufacturer Zscaler, as a solution based in the Deutsche Telekom cloud. Internet Protect Pro protects all of a company's users against cyber threats, on all of their devices and at all locations.

"Our customers want easy solutions. Together with Zscaler, we are freeing them from complexity and relieving them of the need to make expensive investments in their own infrastructure. The Internet Protect Pro system we are offering business customers is complete protection – for both company headquarters and branch locations," explained Dr. Ferri Abolhassan, Director of T-Systems' IT Division and Telekom Security, at a press conference.

Internet Protect Pro is one of the first solutions to emerge from Telekom Security, a new unit that Deutsche Telekom is planning to establish and in

which it plans to consolidate all of the Group's security areas. "The central idea behind Telekom Security is that we need to make security easy, i.e. easy to use and easy to understand," Abolhassan explained.

"Deutsche Telekom has been on the forefront of enabling cloud transformation at businesses," said Jay Chaudhry, CEO of Zscaler. "This partnership will further extend that lead by bringing Zscaler's extensive cloud security platform to provide Deutsche Telecom's customers with comprehensive security, visibility and control in an easy to configure and deploy solution."

Internet Protect Pro: the cyber shield from the network

The new solution is reasonably priced, and it can be expanded as needed to include additional services. What is more, it is available worldwide. Internet Protect Pro shifts the functions of firewalls, intrusion protection systems and proxy servers, as well of systems that protect against viruses and unknown malware, into the Deutsche Telekom Cloud. As a result, companies require less local hardware of their own, and they are freed of the IT administration and configuration required in connection with new types of attacks from cyberspace.

Internet Protect Pro protects against all sorts of cyber threats and data leaks, and it can block malware execution, cyber attacks and data theft in real time. In addition, it tests and analyzes suspicious files in a completely isolated environment ("sandboxing"). This enables it to protect against new and unknown types of malware. Deutsche Telekom operates the Zscaler solution in its highly secure data center in Biere. There it ensures that customer and company data cannot leave Germany by any unauthorized routes.

The new solution is aimed at all companies of all sizes, from SMEs to large corporations. In the 2nd quarter of 2016, it will become available to companies for a free test phase. As of summer 2016, the solution will be a regular part of the new Magenta Security portfolio, and it will become available, also for small business customers.

Experience our products and services live at CeBIT from March 14-18 at the Deutsche Telekom stand in hall 4, stand C38.
In a range of stimulating public discussions, technology leaders will present practical experience they have gained in the latest digital revolution. More information about the program and the scheduled speakers is available at http://transforum.telekom.com**.**

Deutsche Telekom's entire presence at the trade fair is carbon-neutral: All CO_2 emissions generated in setting up and operating the stand are offset fully by carbon-reduction projects abroad.

About Deutsche Telekom

Deutsche Telekom is one of the world's leading integrated telecommunications companies with more than 156 million mobile customers, 29 million fixed-network lines and around 18 million broadband lines (as of December 31, 2015). The Group provides fixed-network/broadband, mobile communications, Internet and Internet-based TV products and services for consumers, and ICT solutions for business customers and corporate customers. Deutsche Telekom is present in more than 50 countries and has around 225,200 employees worldwide. The Group generated revenues of 69.2 billion euros in the 2015 financial year – around 64 percent of it outside Germany.

About T-Systems

As one of the leading global ICT service providers, T-Systems supplies integrated solutions for business customers. These are based on global offerings in fixed-network and mobile communications, highly secure data centers, a unique cloud infrastructure built around standardized platforms and global partnerships, and top security in line with the strictest German data protection regulations, as demanded by our customers. With a footprint in more than 20 countries, 46,000 employees, and external revenue of 7.1 billion euros (2015), T-

Systems is the ideal partner for digital transformation. Alongside traditional ICT services, T-Systems' portfolio also offers cloud access, custom infrastructure, and platforms and software from the cloud, alongside innovation projects in future business areas such as big data, the Internet of Things, machine-to-machine (M2M) communication, and Industry 4.0.

About Zscaler

Zscaler is revolutionizing Internet security with the industry's first Security as a Service platform. As the most innovative firm in the $35 billion security market, Zscaler is used by more than 5,000 leading organizations, including 50 of the Fortune 500. Zscaler ensures that more than 15 million users worldwide are protected against cyber attacks and data breaches while staying fully compliant with corporate and regulatory policies.

Zscaler is a Gartner Magic Quadrant leader for Secure Web Gateways and delivers a safe and productive Internet experience for every user, from any device and from any location — 100% in the cloud. With its multi-tenant, distributed cloud security platform, Zscaler effectively moves security into the internet backbone, operating in more than 100 data centers around the world and enabling organizations to fully leverage the promise of cloud and mobile computing with unparalleled and uncompromising protection and performance. Zscaler delivers unified, carrier-grade internet security, next generation firewall, web security, sandboxing/advanced persistent threat (APT) protection, data loss prevention, SSL inspection, traffic shaping, policy management and threat intelligence—all without the need for on-premise hardware, appliances or software.
